ARKOSLIGHT

Light is a key element for architecture, fostering sensations and emotions which establish a dialogue between people and what happens in the spaces they inhabit. From the very first lines, our luminaires are designed as witnesses to the passage of time, accompanying people throughout their lives.

# REC

Indirect lighting,  
visual comfort.

—  
High luminous flux,  
to bathe walls and even  
ceilings in light.

—  
Rec Double Engine:  
Independent up and  
down lights.

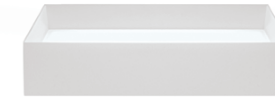

—  
Rec Print:  
customisable finish.

“Light tells the story of architecture, as that which is in darkness does not exist”

Lighting is a key element in the perception of space. Both natural and artificial light, change the way one sees, understands and feels about architecture. Accordingly, a certain type of lighting can imbue meaning to a space. For example, wall sconces can reveal a path, if placed in repetition. They can also imbue personality to areas which are usually hidden in the space.

When it comes to indirect lighting, surfaces and ceilings are illuminated by bouncing the light beam back into the rest of the room. To our eyes, light that is visually pleasing creates a new more welcoming and pleasant setting.

Up light

Down light

*REC Double Engine* allows the upper and lower light emission to be separated thanks to its independent dimming and lighting on/off system.

Double emission

DIM

# DEC PRINT

Thanks to the "Print", its neutral and adherent surface can be painted with the same paint as the supporting wall, so that the light emission is the only star.
